

# EBI Consulting's Telecommunications Services & Public Safety Services

## Overview

Public Safety Telecommunications often require careful planning to achieve. During the planning and deployment of public safety networks, environmental consequences are often overlooked which can result in costly delays, fines, penalties and lawsuits.

The federal government has specific responsibilities pursuant to the National Environmental Protection Act and the National Historic Preservation Act that require government agencies to evaluate the effects of major federal actions on the quality of the human environment. You must ensure government funded projects comply with NEPA environmental goals, as well as making sure the property on which your public safety network is built upon does not have associated environmental liability.

Let EBI Consulting help ensure your compliance through our Public Safety Services.

## Our Public Safety Services:

- Phase I and Phase II Environmental Site Assessments
- FCC NEPA Reports (Screenings, Full NEPA Reports, Environmental Assessments)
